

BUILD GUIDE

StreetBASHER

Technical specification

StreetBASHER

Calibration

Bearings should be inserted with a some force, they must not be loose

1. Tune your printer [Link](#)
2. Print **Fit_test.stl** models and check dimensions and bearing fit test
3. If all dimensions are accurate except for the holes, you will need to compensate for this in the slicer changing **Hole Horizontal Expansion** (Cura) or **Hole Sizes Compensation** (SS).
4. Print once again and repeat.

Hole 11,2mm

Bearing **5x11x4** mm

Hole 19,2mm

Bearing **8x19x6** mm

Hole 21,2mm

Bearing **15x21x4** mm

Hole 16,2mm

Bearing **8x16x5** mm

M4 Hex nut

Ele_box_body_WP8BL150.stl

2x SHCS M3x18mm

Servo + 25T arm

Receiver

If you have **ESC without screw holes** for mounting, use **Ele_box_body_ESC.stl** and secure the esc with zip ties.
And attach **On / Off switch** to **Ele_cover.stl** with double sided tape.

StreetBASHER

Electronics - Ele.box

Route servo cables under servo and then this way into receiver box

Use strips of foam padding to fill these spaces to achieve some waterproofing. Shape of the foam should look like this:
